RESEARCH INTERESTS

My research focuses on **using interpretability to better understand and improve foundation models**. I am exploring two complementary directions:

1. Understanding model behavior

- How does machine intelligence fundamentally differ from human intelligence? [4]
- How do internal mechanisms shape model capabilities and limitations in practice? [2]

2. Understanding model training

- How does training reshape a model's internal computations? [3]
- How can we use insights from interpretability to improve training algorithms and pipelines? [1], [4]
